- **Leasing options available (saves vast capital outlay)**  
**ASK US ABOUT LEASING**
- And much more.....

CAM-LINK has revolutionised the way in which data is transmitted from security cameras to security control rooms. CAM-LINK combines the latest camera technology with the most advanced method of data transmission.

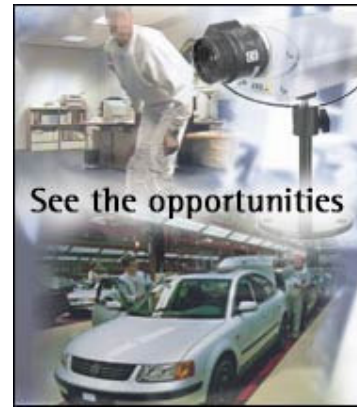

Using data transfer methods such as Radio link technology and the Internet, Data can be transmitted through wireless high-speed gateways.

All our cameras are constructed with the highest level of quality and durability from the leading manufacturers around the world.

*Our preferred supplier:*

**The benefits of Axis' network video products include:**

**Remote access  
any time,  
anywhere**

You can access real-time video images at any time from any computer anywhere, saving time and travelling costs. The video can be stored at remote locations for convenience and/or security.

**Flexibility**

Place it anywhere. You can connect the product to a LAN, DSL, modem, wireless adapter or cell phone.

**Functionality**

Axis' network video products can be programmed for a wide range of applications. More advanced functionality can be provided by Axis' Application Developer Partners.

**Scalability**

Designed to provide plug-and-play simplicity for small installations and flexibility for integration into larger, more professional applications.

**Ease of  
installation**

Everything needed to connect and start streaming video is built into the device, which reduces installation time and simplifies network management.

**Reliability**

Several levels of password protection and a tamper-free network appliance design deliver the most reliable operation.

**Future proof**

Axis' use of open standard protocols and networks for communication means easy system integration with equipment from different manufacturers.
